

ATTENTION ALL

Take Advantage of the Newly Activated Functionality in your Business Management System

- Real-time parts availability and pricing
- Place purchase orders to **MWE** in seconds
- No more faxing of orders or phone calls to check availability
- Integrated functionality in your business system — no additional software
- No more double entry of orders

What Is CODIS-Access?

CODIS-Access is an electronic business-to-business e-commerce protocol developed by Consolidated Data that enables electronic transactions to be sent from computer to computer within a supply chain. The CODIS-Access technology creates standards for electronic documents such as purchase orders, "real time" stock inquiry, order confirmation receipts and much more. CODIS-Access simply acts as the common language between two business systems.

How does a dealer order from MWE using the CODIS-Access protocol?

If you have a business management system with the integrated CODIS-Access interface, then this system is ready for configuration to allow purchase orders and live stock checks to be placed from MWE and other supply chain partners. The same interface that has always been used within your dealership, now will have expanded capabilities enabled for a "live" connection with Midwest Engine and other supply chain partners. This eliminates the need for learning new software or third party interface troubleshooting.

Which software providers have CODIS-Access?

BMS	Web Address	Phone	Email	Availability
Basic Software Systems	www.basic-software.com	(800) 252-4476	sales@basic-software.com	Q1 2010
